

Inspy

InSpy is a Python-based LinkedIn enumeration tool with two functionalities: TechSpy and EmpSpy. TechSpy crawls LinkedIn job listings for technologies used by the target company. InSpy attempts to identify technologies by matching job descriptions to keywords from a newline-delimited file.

EmpSpy crawls LinkedIn for employees working at the provided company. InSpy searches for employees by title and/or department from a newline-delimited file. InSpy may also create emails for the identified employees if the user specifies an email format.

Supported OS:

Linux

How to Hack the details of linkedin for employee working at provided company

Step 1: inspy -h

```
root@kali:~/InSpy# ./InSpy.py "Black Hills Information Security" --empspy ./wordlists/title-list-large.txt --csv bhis.csv
InSpy 2.0.2
